 Application

An Illustration

Caveat

- A very simplistic example.
- Aims only to introduce the combinatorial problem of TPL.

• A set of n students arrive for a summer course, say $\{a, b, c, d, e, f, g, h, i, j, k\}$, n = 11.

- A set of n students arrive for a summer course, say $\{a, b, c, d, e, f, g, h, i, j, k\}$, n = 11.
- They form m study groups, say $\{R, B, O, G\}$, m = 4

- A set of n students arrive for a summer course, say $\{a, b, c, d, e, f, g, h, i, j, k\}$, n = 11.
- They form m study groups, say $\{R, B, O, G\}$, m = 4
- A student may be in more than one study group but will be in at least one, say

- A set of n students arrive for a summer course, say $\{a, b, c, d, e, f, g, h, i, j, k\}$, n = 11.
- They form m study groups, say $\{R, B, O, G\}$, m = 4
- A student may be in more than one study group but will be in at least one, say
 - $R = \{g, h, i, j, k\}$

- A set of n students arrive for a summer course, say $\{a, b, c, d, e, f, g, h, i, j, k\}$, n = 11.
- They form m study groups, say $\{R, B, O, G\}$, m = 4
- A student may be in more than one study group but will be in at least one, say
 - $R = \{g, h, i, j, k\}$
 - $B = \{a, b, e, g\}$

- A set of n students arrive for a summer course, say $\{a, b, c, d, e, f, g, h, i, j, k\}$, n = 11.
- They form m study groups, say $\{R, B, O, G\}$, m = 4
- A student may be in more than one study group but will be in at least one, say
 - $R = \{g, h, i, j, k\}$
 - $B = \{a, b, e, g\}$
 - $O = \{c, b, d\}$

- A set of n students arrive for a summer course, say $\{a, b, c, d, e, f, g, h, i, j, k\}$, n = 11.
- They form m study groups, say $\{R, B, O, G\}$, m = 4
- A student may be in more than one study group but will be in at least one, say
 - $R = \{g, h, i, j, k\}$
 - $B = \{a, b, e, g\}$
 - $O = \{c, b, d\}$
 - $\bullet \ \ G = \{e, f, g, i\}$

- A set of n students arrive for a summer course, say $\{a, b, c, d, e, f, g, h, i, j, k\}$, n = 11.
- They form m study groups, say $\{R, B, O, G\}$, m = 4
- A student may be in more than one study group but will be in at least one, say
 - $R = \{g, h, i, j, k\}$
 - $B = \{a, b, e, g\}$
 - $O = \{c, b, d\}$
 - $G = \{e, f, g, i\}$
- There are *n* single occupancy apartments in the university campus for their accommodation.

CS09S012

- A set of n students arrive for a summer course, say $\{a, b, c, d, e, f, g, h, i, j, k\}$, n = 11.
- They form m study groups, say $\{R, B, O, G\}$, m = 4
- A student may be in more than one study group but will be in at least one, say

```
• R = \{g, h, i, j, k\}
• B = \{a, b, e, g\}
```

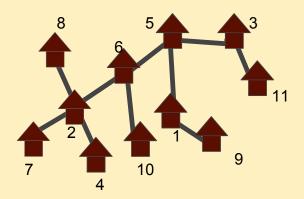

- $O = \{c, b, d\}$
- $G = \{e, f, g, i\}$
- There are *n* single occupancy apartments in the university campus for their accommodation.
- All these apartments are placed such that streets connecting them do not form loops

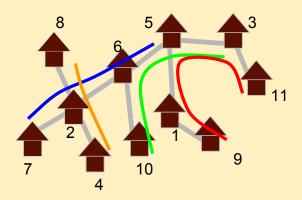

The problem

How should the students be allocated apartments such that each study group has the least distance to travel for a discussion?

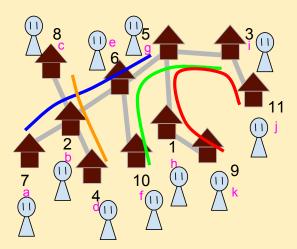

The combinatorial problem terminology

- \bullet The set of study groups i.e. sets of students $\to S{\rm ET}$ SYSTEM / HYPERGRAPH
- ullet The streets with apartments o TARGET TREE
- The route mapping to study groups \to TREE PATH LABELING (TPL)
- The apartment allocation → PATH HYPERGRAPH
 ISOMORPHISM

The combinatorial problem terminology

- The set of study groups i.e. sets of students \rightarrow SET
- The streets with apartments \rightarrow TARGET TREE
- The route mapping to study groups \rightarrow TREE PATH Labeling (TPL)
- The apartment allocation → PATH HYPERGRAPH ISOMORPHISM

The combinatorial problem terminology

- The set of study groups i.e. sets of students \rightarrow SET
- The streets with apartments \rightarrow TARGET TREE
- The route mapping to study groups \rightarrow TREE PATH Labeling (TPL)
- The apartment allocation → PATH HYPERGRAPH ISOMORPHISM

The combinatorial problem terminology

- The set of study groups i.e. sets of students \rightarrow SET
- The streets with apartments \rightarrow TARGET TREE
- The route mapping to study groups \rightarrow TREE PATH Labeling (TPL)
- The apartment allocation → PATH HYPERGRAPH ISOMORPHISM

The combinatorial problem terminology

- The set of study groups i.e. sets of students \rightarrow SET
- The streets with apartments \rightarrow TARGET TREE
- The route mapping to study groups \rightarrow TREE PATH Labeling (TPL)
- The apartment allocation → PATH HYPERGRAPH Isomorphism

The combinatorial problem

Terminology [contd.]

There exists an apartment allocation that "fits" the route mapping

The combinatorial problem

Terminology [contd.]

There exists a hypergraph isomorphism that "fits" the TPL

The combinatorial problem

Terminology [contd.]

There *exists* a hypergraph isomorphism that "fits" the TPL → the TPL is FEASIBLE

The combinatorial problem

Terminology [contd.]

There *exists* a hypergraph isomorphism that "fits" the TPL → the TPL is FEASIBLE

There *exists* an apartment allocation that gives the optimal route mapping

The combinatorial problem

Terminology [contd.]

There *exists* a hypergraph isomorphism that "fits" the TPL → the TPL is FEASIBLE

There *exists* a hypergraph isomorphism that gives paths/adjacent vertices in tree

The combinatorial problem

Terminology [contd.]

There exists a hypergraph isomorphism that "fits" the TPL \rightarrow the TPL is FEASIBLE

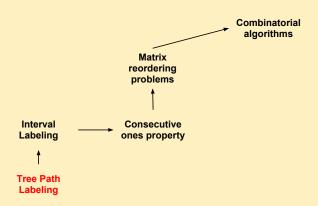

There exists a hypergraph isomorphism that

→ the hypergraph is a PATH HYPERGRAPH

Consecutive Ones → **Path Labeling**

The motivation

Tree path labeling of path hypergraphs

The two problems

Characterization of a *feasible TPL* and finding the certificate for feasibility i.e. hypergraph isomorphism

2

Computation of a *feasible TPL* if any

Tree path labeling of path hypergraphs

The two problems

1

Characterization of a *feasible TPL* and finding the certificate for feasibility i.e. *hypergraph isomorphism*

2

Computation of a *feasible TPL* if any

1

Characterization of feasible TPL

Given

- i. a set system or hypergraph \mathcal{F} ,
- ii. a feasible TPL $\ell: \mathcal{F} \to \mathcal{P}$ where \mathcal{P} is a path system from tree T and $supp(\mathcal{P}) = V(T)$,

what is the hypergraph isomorphism

$$\phi: \mathsf{supp}\,(\mathcal{F}) o \mathsf{supp}\,(\mathcal{P})$$

such that the induced labeling $\ell_\phi = \ell$?

0000000000

Computing a feasible TPL

Given hypergraph \mathcal{F} with certain properties and a k-subdivided star T, can we find a feasible TPL ℓ to T?

1

Characterization of feasible TPL

The characterization

ICPPL + a filtering algorithm

^{a:} [TBD Write the theorem]

The characterization

ICPPL + a filtering algorithm

^{a:} [TBD Write the theorem]

Computing a feasible TPL

Given hypergraph \mathcal{F} with certain properties and a k-subdivided star T, can we find a feasible TPL ℓ to T?

Special case

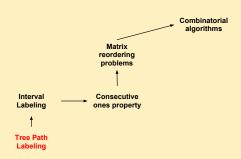

Interval assignment problem / COP

- **1** T is a path \Longrightarrow paths in T are intervals a^{a} [quick illustration]
- Only pairwise intersection cardinality needs to be preserved ⇒ ICPIA [NS09]
- Higher level intersection cardinalities preserved by Helly Property – [Gol04]
- filter_1, filter_2 do not need the the exit conditions. a: [is this cryptic?]

This problem is equivalent to Consecutive Ones Property of binary matrices [NS09]

Path Labeling - Graph Isomorphism

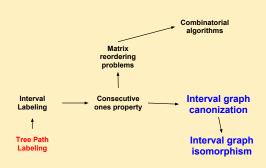

Application

Path Labeling → Graph Isomorphism

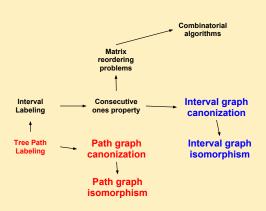

Application

Path Labeling → Graph Isomorphism

Application
